Scenario Valuation

Observed inputs for scenario framing:

- Market cap: 983,199.0956432528 million USD (provider units). Source: Finnhub profile/metrics (finnhub.io) | URL: <https://finnhub.io/api/v1/stock/profile2?symbol=LLY> | Retrieved: 2026-02-14T15:15:32.473Z.
- Profitability backdrop: high margins and positive net income, offset by negative FY free cash flow. Source: Finnhub financials/metrics (finnhub.io) | URL: <https://finnhub.io/api/v1/stock/financials-reported?symbol=LLY&freq=annual> | Retrieved: 2026-02-14T15:15:36.960Z.

Model assumptions (not observed facts):

- Bull case (30%): regulatory and launch execution outperforms, oral and injectable obesity demand remains supply-supported, multiple remains elevated.
- Base case (50%): growth remains strong but valuation expansion moderates; execution broadly tracks company guidance cadence.
- Bear case (20%): regulatory delays/label constraints or competitive pricing pressure compress expectations and valuation.

Full Report (cont.)

Inference:

- Net scenario weighting supports a constructive bias because profitability scale and catalyst depth outweigh near-term valuation/volatility and cash-conversion concerns.
